

National Show & Sale of Pedigree Breeding Stock 2026

Venue: Shrewsbury Auction Centre

Show: Friday 24th July 2026 / 2:00pm

Sale: Saturday 25th July 2026 / 10:30am

FOR THE ATTENTION OF ALL VENDORS AT SOCIETY SALES

To protect the integrity of the breed it is important that sheep presented at Society events represent the best the Suffolk can offer. Members' attention is drawn to the following:

1. **ARTIFICIAL COLOURING** - No artificial colouring of hair on heads/legs, dressing, bleaching or chemical agent (except Department of Environment, Fisheries and Rural Affairs' approved and recognised show dip and colourless oil on the head) shall be used on or applied to sheep entered in this show/sale. In the event that any sheep is found by the Inspectors or veterinary surgeons to have been artificially coloured, the owner shall upon being so required by the stewards forthwith remove such sheep and all other sheep in the same consignment from the Society Sale and the sale ground and the breeder will be banned from entry into any Society Sale or Society Show held during the next calendar year.
2. **HAIR SAMPLES** - Hair samples will be taken from each pen by the veterinary surgeon(s). A number of these will be selected at random at a later date and tested under clinical conditions for non-approved artificial colouring. Where found, the breeder will be notified in writing of the findings and banned from entry into any Society Sale or Society Show held during the next calendar year.
3. **INCORRECT MOUTHS/TESTES** - The veterinary surgeons will, without limitation, inspect for correct mouths and, in the case of rams, testes. Any sheep which is not approved by the Inspectors and/or veterinary surgeons shall upon being so required by the stewards forthwith remove such sheep and shall not be entered at any other Society sale and cannot be registered with the Society. The decisions of the Inspectors and veterinary surgeons on all such matters are and shall be final and binding, and (in the absence of bad faith) without any responsibility or liability on their part.
4. **BLACK WOOL AND PEELING INSPECTIONS** – Council has deemed it appropriate to carry out inspections and assess all sheep consigned to the Society sales for the presence of Black Wool and or level of peeling in any given sheep presented for sale. There will be three Council members performing this inspection to make an informed decision on excessive or not. This condition is considered by council as undesirable in pedigree breeding. Any sheep that fails the inspection has therefore to be removed from the sale as per the conditions applied to a failed veterinary inspection.

PLEASE NOTE: There will be no appeal to these decisions on the day.

**Rebasing** - EBVs and indexes have been rebased and are expressed relative to the average animal in 2010.

### Weight adjusted traits

Please note that all traits marked \* are now weight adjusted. This means that EBVs are a better prediction of carcase composition at a fixed weight.

Example: A ram with a muscle depth EBV of +2mm is estimated to produce lambs with loin depths 1mm deeper at a fixed weight than a ram with an EBV of 0

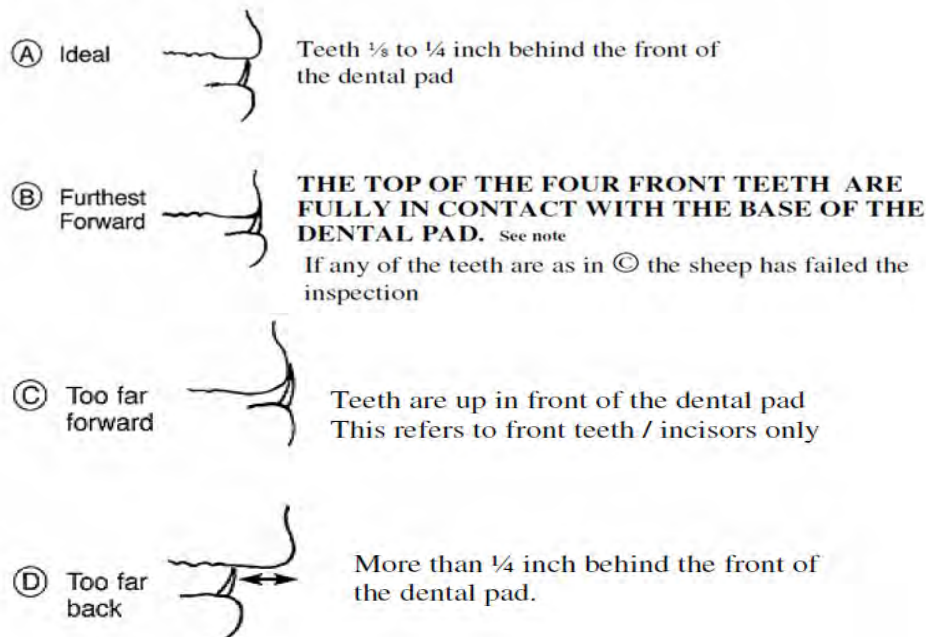

## Veterinary inspections at Society sales

### Teeth Diagram

To have a long and productive life a Suffolk sheep male or female must be able to eat grass. It's important that the functionality and structure of a sheep's mouth is physically able to do this. We often hear phrases like undershot or overshot as ways of describing this, but a picture paints a thousand words!

A and B are acceptable.

C and D will be rejected.

### A few words on testicles!

Rams put forward for sale at any sale should be functional, and that means it should have the correct equipment to be able to perform its duties and provide a viable semen sample that can get females in lamb.

The Testes are essential to this function and part of the vet's inspection at society sales is to check this out.

Scrotal circumference correlates strongly with semen quality and quantity. Rams with larger healthy testicles produce more sperm and have higher fertility rates.

Minimum scrotal circumference:

| Ram lambs <1 year | Shearling rams 1-2 year | Mature rams >2 years |
|-------------------|-------------------------|----------------------|
| 30cm              | 32cm                    | 36cm                 |
